LUDLUM MODEL 44-213
FIDLER LOW ENERGY GAMMA DETECTOR

September 2019
STATEMENT OF WARRANTY

Ludlum Measurements, Inc. warrants the products covered in this manual to be free of defects due to workmanship, material, and design for a period of twelve months from the date of delivery. The calibration of a product is warranted to be within its specified accuracy limits at the time of shipment. In the event of instrument failure, notify Ludlum Measurements to determine if repair, recalibration, or replacement is required.

This warranty excludes the replacement of photomultiplier tubes, G-M and proportional tubes, and scintillation crystals which are broken due to excessive physical abuse or used for purposes other than intended.

There are no warranties, express or implied, including without limitation any implied warranty of merchantability or fitness, which extend beyond the description of the face there of. If the product does not perform as warranted herein, purchaser’s sole remedy shall be repair or replacement, at the option of Ludlum Measurements. In no event will Ludlum Measurements be liable for damages, lost revenue, lost wages, or any other incidental or consequential damages, arising from the purchase, use, or inability to use product.

RETURN OF GOODS TO MANUFACTURER

If equipment needs to be returned to Ludlum Measurements, Inc. for repair or calibration, please send to the address below. All shipments should include documentation containing return shipping address, customer name, telephone number, description of service requested, and all other necessary information. Your cooperation will expedite the return of your equipment.

Introduction

The Ludlum Model 44-213 detector is used primarily for the detection of low-energy gamma radiation from approximately 10 keV to 200 keV. The word “FIDLER” is an acronym for Field Instrument for the Detection of Low Energy Radiation.

The detector consists of a 12.7 cm (5 in.) diameter by 1.2 mm (0.05 in.) thick CsI scintillator coupled to a photomultiplier tube, with aluminum housing. The window area is approximately 127 cm² and is covered by 10.6 mg/cm² metallized polyester. It features a black protective cap to protect the thin window when the detector is not being used.

Compatible instruments for use by this detector provide detector high voltage of 500-1200 Vdc and input sensitivity of approximately -10 mV.

The optional handle (part # 4574-066) is adjustable and ergonomic, allowing the user to easily scan while keeping the detector up to 30.5 cm (12 in.) above the floor or ground.
Packing and Unpacking

Remove the calibration certificate or detector functional check certificate and place it in a secure location. Remove the detector(s) and accessories (if applicable) and ensure that all items on the packing list are in the carton. If multiple detectors are included, refer to the calibration certificates for the serial number (SN) matches.

To return an instrument or detector for repair or calibration, provide sufficient packing material to prevent damage during shipment and affix appropriate warning labels to promote careful handling. Every returned instrument must be accompanied by an Instrument Return Form, which can be downloaded from the Ludlum website at www.ludlums.com. Find the form by clicking the “Support” tab and selecting “Repair and Calibration” from the drop-down menu. Then choose the appropriate Repair and Calibration division where you will find a link to the form.
Specifications

**Voltage Requirements**: 500-1200 VDC

**Input Sensitivity**: -10 mV

**Data Range**: 0 to 1,500,000 cpm

**Window Area**: 127 cm$^2$ (10.6 in$^2$) active and open

**Window Density**: 10.6 mg/cm$^2$

**Background (10 µR/hr)**: <9000 cpm (gross counting)

**Efficiency (4π)**: 13% for $^{241}$Am; 8% natural U

**Recommended Energy Range Operation**: 10 keV to 200 keV gamma

**Energy Response**: energy dependent

**Scintillator**: 12.7 cm (5 in.) diameter by 1.2 mm (0.05 in.) thick CsI crystal

**Photomultiplier Tube**: 12.7 cm (5 in.) diameter; head-on type; magnetically shielded

**Connector**: Standard Series “C” (other types available upon request)

**Construction**: aluminum housing

**Size**: 15.2 x 23.6 cm (6 x 9.3 in.) (Dia x L)

**Weight**: 3.2 kg (7 lb)
**Temperature:** -15 to 50 °C (5 to 122 °F); may be certified for operation from -40° to 65°C (-40° to 150°F).

**Pollution:** Pollution Degree 3 (as defined by IEC 664) (Conductive pollution or dry nonconductive pollution that becomes conductive due to condensation occurs. To be found in industrial environment or construction sites (harsh environments).

Optional Assemblies

There are two optional handle assemblies and a tripod assembly for the Model 44-213 FIDLER. Each of these assemblies can make using the detector easier and more versatile, depending on how and where the detector is used.

The first is the vertical handle (part # 4574-066). It is an adjustable and ergonomic handle that allows the user to more easily scan while keeping the detector up to 30.5 cm (12 in.) above the floor or ground. See top, left drawing.

There is also a horizontal handle (part # 4574-097), which is fixed horizontally on top of the detector and allows the user to carry the detector while pointing it outward. See drawing at right.

Finally, there is a tripod assembly (part # 4574-099). This includes an attachment and a tripod stand, which allows the detector to sit on a flat surface on its own. See the drawing bottom, left.
